

skd is released and gets an appliance

skd, a software I told you in [this blogpost](<http://dennis.dieploegers.de/easy-ssh-public-key-distribution/>) about, has now been released as version „1.0b“, being the first public release.

The software is considered beta (thus the „b“-suffix) so all features have been included, but some errors still can occur.

For easy deployment I wrapped up a virtual appliance in ova-format, which you can download on [[<http://dploeger.github.com/skd/>]|skd's website]] or [[<https://github.com/dploeger/skd>]|its repository]].

It would be great if some of you would just check it out and tell me through [[<https://github.com/dploeger/skd/issues>]|skd's issue tracker]] when there's any problem with the software or the appliance.

Overall it was a pleasure creating the appliance using VMware's quite brilliant [[<http://www.vmware.com/products/studio/overview.html>]|VMware Studio]].

The appliance is using [[<http://www.ubuntu.com/>]|Ubuntu]] as the operating system, so that should be noted, too.

Have fun with it.
