

Twitter vectorized Iconset

based on <https://dev.twitter.com/docs/image-resources>

<http://dennis.dieploegers.de>

v1.1

The guys at twitter created a basic set of icons for all developers using the Twitter api. It is located [\[\[https://dev.twitter.com/docs/image-resources|on the Twitter developers site\]\]](https://dev.twitter.com/docs/image-resources).

However, they only provided very small version of the icons in a bitmap format. [\[\[https://dev.twitter.com/issues/597|Like this guy says\]\]](https://dev.twitter.com/issues/597), developers need various other icon sizes and it's kinda hard do create one from 16×16 pixel icons.

So, today I vectorized the twitter icons. You can download the icons as **.sketch**, **.pdf** or **.svg**.

(I hope, Twitter doesn't mind me doing that.)

****Update v1.1:****

- * Corrected the favorite icons
- * Created icon slices inside the Sketch file to directly export icons in two sizes
